Comment : I do believe that this is a very interesting subject with cell phone usage reaching exponential numbers. I believe that the use of cell phones on flights should be further prohibited and any existing prohibitions shouldn't be relaxed. While on a flight, we are all within each others personal space, and allowing further usage of cell phones would interfere with our personal privacy. The last thing most people want while trying to relax on a flight is the person next to them arguing with their significant other about why they didn't change the baby's diapers before they left. Hypothetically speaking, if everyone on the aircraft decided to use the cell phone at the same time, can you imagine the noise that this would generate?

Cell phones are a great means of communication, but however, their place aboard aircraft for personal use, is just not needed.
